Your safety and comfort,  
our solutions

**TIME LINE**

## CloseTheGap DNA

Mathijs Wagenaar, founder of CloseTheGap, has been riding bikes practically all his life. After his racing career, Mathijs became an editor for the Dutch cycling magazine Fiets. In an attempt to increase safety and mutual respect among cyclists and multi-use trail users he came up with the idea of a bell that was so cool that people would want to have it. The HideMyBell computer mount bell concept was born. Three years later CloseTheGap

was founded, offering a range of cycling products alongside the HideMyBell. All of the brand's products are developed and offered to fulfil the company's mission of making cycling safer, more fun and more comfortable. Professional riders like Froome and Team Jumbo-Visma use CloseTheGap products in training and racing. These champs have chosen for safety, style and comfort. What will you choose?

## Cyclist driven development

To shorten the time from product idea to production we have rapid prototyping in-house R&D. Computer modeling software and 3D printing enable us to test every idea during the development phase: from concept models to the first real world test models. Only after extensive field testing and several rounds of comprehensive reviews, do we decide if the new product meets our quality and design standards. If so, we move on to the production phase. Our production, quality control, and warehousing are situated in Zwolle the Netherlands.

# Jumbo-Visma

CloseTheGap is official partner of the World Tour Team Jumbo-Visma, which uses our innovative bike computer mounts and bell. CloseTheGap's HideMyBell raceday series fulfils the high demands of a World Tour team.

Mathieu Heijboer (Head of Performance, Team Jumbo-Visma):

*"We are always looking for partners that can contribute to the team's development plans. When it comes to product innovation CloseTheGap*

*is the best possible partner to develop a mount for our innovative Cervélo handlebar / stem combo and Garmin bike computers. The standard HideMyBell raceday sl is already a great mount to use, because of its high stiffness and low weight."*

## Raceday S5

- Designed for Garmin Edge 530/830
  - Aerodynamic mount: stiff but just 6 mm thick
  - Optimized for Garmin Edge 530/830 size
  - Racing specific design: no bell option

  - Tool-free removable bell
  - Bell trigger left or right option
  - Lightweight injection moulded UD carbon: 27g (+11 g removable bell)
- MSRP: 59,95 euros**

**cervélo**

# HideMyBell raceday series

This unique series of computer mounts shows what we stand for: increased safety with innovative products. The HideMyBell raceday is a real must-have with premium looks and materials. The mount is made of an extremely stiff injection moulded UD carbon composite. This new material makes lightweight & minimalistic engineering possible to offer next level stiffness values.

The bike bell has quick release, tool free removal for days when that extra 11 grams counts. The bell hammer can be located to the left or right. All Raceday products are HideMyBell accessory ready. UCI World Tour proven by Team Jumbo-Visma.

of computer  
mounts

# HideMyBell-range

Every proper city bike has a bell, but for a lot of sports minded cyclists that is a big no-go: it looks stupid, it ruins the thoroughbred looks and aerodynamics, and hey, the pros don't have a bell either! Sound familiar? Then the HideMyBell is made for you. It integrates the bell discretely into your out-front computer mount. Neither you nor your grupetto will see it, but your fellow road users will definitely hear you coming! And the pro's *DO* use this one! The HideMyBell is much more than just a bell. We also integrated an attachment point for an optional accessory mount, so you can use your action cam or a front light.

## COMPATIBILITY CHART

new

### HideMyBell regular2

New 2nd gen. design: now upgraded with a stainless steel spring & brass bell hammer.

- Out-front design
  - Loud, crisp and rattle-free bell with an easy no-look trigger, even for thick winter gloves

Our unique adapter to install any lamp with a 26 mm round handlebar mount. Just like a virtual lower handlebar for accessories

MSRP: 14,95 euros

## Adapter Wilier Alabarda

Special in between adapter to install the HideMyBell raceday fi on your Wilier cockpit.

MSRP: 14,95 euros

## CoverMyBack 2+

Have you ever had your mudguard twist to the side and expose your back to road gunk? Or have you struggled to get under an under-saddle or seatpost mounted mudguards and lights on an aero bike? We experienced that too. So we developed a mudguard and light to offer you comfort and safety in style: the CoverMyBack 2+.

The best place and a clean look for your rear light  
30 Lumens COB led light tech by Spanninga  
Power / eco / flash mode (5 / 8 / 10 hours).

- Quick tool free lamp installation / removal
- USB rechargeable lamp
- Stable and vibration-free mudguard
- Suitable for 7-9 mm saddle rails
- Mudguard size: 29 x 7,5 cm
- Works with many saddlebags
- Modular base accepts only light, only mudguard, both, or none.

**MSRP:** 34,95 euros

## CoverMyBack2

- Quickly mount & remove your mudguard
  - Stable and vibration-free mudguard
  - Suitable for 7-9 mm saddle rails
  - Mudguard size: 29 x 7,5 cm
  - The same mudguard and mount as the CoverMyBack 2+, just without the light
- MSRP:** 19,95 euros

Your safety  
and comfort,  
our product  
solutions

## HideMyMirror

For drop handlebars  
with 19-23 mm internal barplug  
diameter.

- Aerodynamic design
- Cars are visible at 100m,  
bikes at 40m separation.
- Size: 47\*45mm,  $\Phi$ 32 outside
- Lightweight 16 g
- Materials: ABS body, Polycarbonate  
(PC) glass, Steel Bolt.
- Powered by The Beam
- Patent pending

**MSRP:** 24,95 euros

## ErgoMyRide XC-M

Good ergonomics is important for every ride. We have been fans of these innovative inner bar grips for quite some time. Thanks to perfect ergonomics your hands are positioned on the handlebars in an ergonomic position, and you can even brake when using them.

- Improves comfort, grip and aerodynamics on less technically challenging segments
- Lightweight Swiss composite: 96 grams (set)
- UCI approved for MTB
- Clamp size 22.2 mm / 0.87" (standard MTB-grip diameter)
- Color: matt black
- Powered by SPIRGRIPS®

**MSRP:** 49,95 euros

## HideMyWaste

Who hasn't been bothered by seeing trail or roadside gel packs and energy bar wrappers? But stuffing your jersey pockets with bar wrappers and empty gel sachets isn't ideal either, and you can end up inadvertently littering when grabbing for a tool or your next bar.

HideMyWaste is the solution: a small container that mounts to any stem, toptube or downtube. The Press & Store principle is easy: just push your waste inside and it will stay there for the rest of your ride. Developed in partnership with Grandfondo Amstel Gold Race.

**MSRP:** 14,95 euros - special order only.

Your environment,  
our solution

## SockMyFeet

We want you to ride safely, but you need to look good as well! Therefore we asked Dutch bike sock specialist Sockeloen to design a stylish sock. Sockeloen socks are used by many pro riders. #Sockdoping is the only type that CloseTheGap stands for... or rather, in!

**MSRP:** 14,95 euros

## LE CYCLE

SONNETTE >>> CLOSE THE GAP HIDE MY BELL

### Complètement sonné!

Nonobstant la loi qui impose d'avoir un avertisseur sonore, les routiers s'en passent et préfèrent les sifflements ou invectives pour signaler leur présence. La petite sonnette détonne sur le guidon, et si on la montait ailleurs... **Par F. Iehl**

Une sonnette, c'est un petit champignon métallique, et inévitablement, qui passe généralement sur les cintres. Prévaut de l'espace, cet accessoire de sécurité est banni de tous les vélos de course de ce nom. De plus, les formes particulières des cintres ne facilitent guère leur

mise en place. Et pourtant, le «ding» qui retentit sort souvent le piéton ou le conducteur de sa torpée avant le choc fatidique... La marque néerlandaise Close The Gap propose une solution attrayante avec Hide My Bell. On utilise en fait le support GPS pour insérer en dessous un avertisseur

**Infos pratiques**  
 Prix: 37 € et support d'éclairage à 13 €  
 Poids: 51 g le support sonnette et 21 g pour l'éclairage  
 Caractéristiques: support de compteur GPS associé à une sonnette compatible Garmin, Wahoo, Bryton, Polar, Lezyne et MiP  
 Distributeur: Close The Gap  
 Discretion  
 Efficacité  
 Prix  
 Gestuelle

La sonnette est quasi invisible sous le GPS. Il faut lever le marteau pour qu'elle sonne.

## Reviews

Warren Rossiter's pick Pick of the year 2016: "It's a clever bit of design from Dutch cycling journo Mathijs Wagenaar, who handed me one of the originals at the Dutch Bike MOTION show, and I've been using one ever since."

### BIKERUMOR!

Jason O'Mahoney: "HideMyBell is a well priced and clever design, and will appeal to those who don't like the aesthetics of a regular bicycle bell, or despise clutter around their handlebar."

## road.cc

"If you'd like to fit a bell to your posh road bike for the purposes of announcing your presence on the local shared used path, but can't stomach the look of one on your bars, the HideMyBell out-front mount might be the thing for you."

## Cycling WEEKLY

"I soon got the hang of hitting the bell on the move and it is more than loud enough to get people's attention."

## TOUR

What a great idea! The bell can hardly be seen, is easy to use and lets pedestrians know you're there. We don't want to ride without it anymore."

Hot: Bell located in out-front computer mount declutters handlebar tops, Comes with GoPro style adapter that attaches underneath the mount. Supports many different computer brands
